One of the big advantages of a combination wind and solar power system is that often--not always, but often--when sunlight decreases, wind increases and vice-versa. When there's not enough wind to turn your turbines, your solar panels can make up the difference.

Hybrid 1kw solar panel kit has a hybrid inverter. The difference between it and a standard grid-tie inverter is that a hybrid one doesn't just shut down once a power outage in the grid occurs. Hybrid inverters support a battery or have a built-in energy storage. When the grid goes down, an inverter switches your appliances to battery support.

Solar Inverter Price in India. A solar inverter is a type of electrical converter which converts the DC (direct current) into a utility frequency AC (alternating current) that can be fed into a main grid in on-grid solar system. And vice versa in off grid solar system and hybrid solar system is very important part of a solar system.

An on-grid inverter's main job is to convert DC power generated from the PV array into usable AC power. Hybrid inverters go a step further and work with batteries to store excess power as well. In the developing world, hybrid inverters are more of a necessity to compensate for weak or intermittent grids or a lack of grid electricity all together.
