

Will China install 30 GW of energy storage by 2025?

In July 2021 China announced plans to install over 30GW of energy storage by 2025 (excluding pumped-storage hydropower), a more than three-fold increase on its installed capacity as of 2022.

Why was the energy storage roadmap updated in 2022?

The Energy Storage Roadmap was reviewed and updated in 2022 to refine the envisioned future states and provide more comprehensive assessments and descriptions of the progress needed (i.e., gaps) to achieve the desired 2025 vision.

How many GW of battery storage capacity are there in 2022?

Batteries are typically employed for sub-hourly, hourly and daily balancing. Total installed grid-scale battery storage capacity stood at close to 28GW at the end of 2022, most of which was added over the course of the previous 6 years. Compared with 2021, installations rose by more than 75% in 2022, as around 11GW of storage capacity was added.

Will battery energy storage investment hit a record high in 2023?

After solid growth in 2022, battery energy storage investment is expected to hit another record high and exceed USD35 billion in 2023, based on the existing pipeline of projects and new capacity targets set by governments.

Is India ready for battery energy storage in 2022?

The Inflation Reduction Act, passed in August 2022, includes an investment tax credit for stand-alone storage, promising to further boost deployments in the future. In its draft national electricity plan, released in September 2022, India has included ambitious targets for the development of battery energy storage.

How much energy will the United States use by 2040?

Likewise, it could deploy 85 to 140 terawatt-hours (TWh) of energy capacity by 2040 and store up to 10 percent of all electricity consumed. This corresponds to a cumulative investment of \$1.5 trillion to \$3 trillion (Exhibit 2).
