A lithium battery charger aids the battery's efficiency and storage process. As mentioned previously, the voltage range of lead-acid vs. lithium batteries matters. Because a lead-acid battery is full at 12.7V-12.8V, most lead-acid chargers won't start bulk charging again until the battery's charge drops below 12.5V-12.7V.

You can use this 3 bank battery charger for 36V, 24V or 12V systems (12V in series). You can also double up on different banks. It charges to 14.6V by constant current at 10A, then floats to 13.8V. A Superior, Smart 3 Bank Charger. The Ionic 3 Battery Charger is a smart, professional charger equipped with the latest technology.
