

Amazon renewable energy program manager

Amazon has announced that in 2022, it grew its renewable energy capacity by 8.3 gigawatts (GW) through 133 new projects in 11 countries. This brings Amazon's total portfolio to more than 20 GW--that could generate the amount of energy to power 5.3 million U.S. homes--across 401 renewable energy projects in 22 countries.

As companies design their five-year energy plans and sustainability goals, we should all be looking ahead beyond the coarse annual renewable energy procurement cycles tracked today. Instead, we should be preparing corporate PPA portfolios for the true goal of granular real-time alignment between demand and renewable energy generation.

Amazon's Renewable Energy Optimization team produces software to maximize the effectiveness of our portfolio of wind and solar farms. The team develops and runs machine learning models that forecast the state ...
