ABSTRACT Drying of agricultural products is an energy-demanding process. High costs, scarcities in fossil fuels and environmental threats attract the use of solar energy as an alternate source, especially in developing countries. Increasing environmental concerns led to the use of clean and green energy resources in the field of drying agricultural products. A solar ...

On the other hand, DX-SAHP systems can gain heat from solar energy and ambient air at the same time with a bare solar collector structure, when the collector temperature is below ambient air. DX-SAHP systems desired operation mode is S/ASHP, however they can still operate in ASHP mode when there is zero solar irradiation.
