Electrical power is required for your internet connection and internet voice service to work. If there is a power outage, the services will not process calls, including those to Emergency 911. With active batteries, a BBU for your modem and internet phone equipment will provide temporary power during an outage.

The EF ECOFLOW has a power output of 2400W, which can concurrently provide energy to up to 15 devices. The power of 3400W devices may be increased when X-Boost is activated. If the power goes out, you won't have to worry about the functionality of your refrigerator, microwave, or dryer, among other home equipment.

Lithium-Ion Batteries: These are the most common type of battery used in home battery backup systems. They are lightweight, have a longer lifespan, and higher energy density than lead-acid batteries. Flow Batteries: These batteries use a chemical solution that flows through the battery to store and release energy.

A portable power station and solar generator are ideal backup power sources. Since these devices operate independently of the power grid, they stay clear from any impact of a widespread outage. In other words, when the grid is down, your lights, Wi-Fi, and other essential electronics can still be up and running, thanks to these independent power sources.
