An Uninterruptible Power Supply (UPS) is a device that primarily provides battery backup to connected devices when the electrical power fails or drops to an unacceptable voltage. It does this using its internal battery which can keep your devices working anywhere from a few minutes to several hours depending on the power rating and the number ...

The CyberPower CP900AVR is the best UPS for people who want to back up a few small electronics--such as a modem, router, PC, external hard drive, or game server--during a blackout lasting up to ...

Do You Have a Generator in Place - Battery backup systems generally cannot provide power to computer systems for an extended period. Hence, gas or diesel-powered generators often accompany them. When this is the case, your battery backup system only needs to supply power until the generator kicks in and the electricity flows again.

This makes a UPS battery backup especially valuable for computers, preventing work from being lost or files from being corrupted by an improper shut-down. Many UPS units also include surge protection for connected devices. How does a UPS battery backup work? Consumer-grade UPS backup devices are typically classified as "standby UPS power."

We tested and researched the best home battery and backup systems from EcoFlow, Tesla, Anker, and others to help you find the right fit to keep you safe and comfortable during the hurricane season.
