

We restrict our sample to projects in the renewable energy production or electricity transmission sector (n=1,869). ... The Hamilton Project, Brookings Institution, Washington, DC. Bui, Quoc Trung ...

ADVANCING INCLUSION THROUGH CLEAN ENERGY JOBS 7 As a result, big changes in consumption patterns, manufacturing processes, the power sector, and regulatory affairs--all related to the shift to

Even under optimistic assumptions about future energy consumption, France still needs a new strategy to manage energy production. A series of government reports have considered the energy crisis ...

If current trends continue, federal support for clean energy development will decline precipitously in coming years. Using data from a new report, Mark Muro, Letha Tawney, and Alex Trembeth ...

The White House set out a target of 80% renewable energy generation by 2030 and 100% carbon-free electricity five years later. With 79% of total U.S. energy production still coming from...

China's National Energy Administration plans to spend \$360 billion on renewable energy to meet a goal of 15 percent non-fossil energy production by 2020. Upgrading energy infrastructure with ...

Executive summary . The transition to a cleaner, more resilient U.S. economy continues to gain speed. Shifts toward renewable energy generation, battery technologies, and adaptive designs are ...

The transition to the clean energy economy will primarily involve 320 unique occupations spread across three major industrial sectors: clean energy production, energy efficiency, and environmental ...

Inexpensive, efficient storage of non-fossil energy is the holy grail of energy research, and would truly be a game-changer for effectively integrating intermittent renewable sources into the grid.

Demand is expected to quadruple by 2040 under the International Energy Agency's Sustainable Development Scenario, in which global action would limit the global temperature rise to well below 2 ...

As part of the Brookings Election '24 initiative, Samantha Gross, director of the Energy Security and Climate Initiative at Brookings, talks about the energy and climate policy issues in the U.S ...

Permitting reform challenges lawmakers and regulators to assess the usefulness of extant permits and their processes to minimize or remove barriers to building clean energy infrastructure. This...

Donald Trump has made clear in his campaign that he supports a significant shift in U.S. energy policy, characterized by a robust emphasis on fossil fuels, extensive regulatory rollbacks, and a...

Existing Permit Requirements. The permitting process for renewable energy projects is multi-layered, and the exact type and number of permits for a particular project depends on its size ...

To improve utility for renewable energy, in realizing the 2030 non-fossil fuel electric power production target, we recommend the following public policy changes. Make room for development for ...

The Hamilton Project at the Brookings Institution and The Energy Policy Institute at the University of Chicago aim to support broadly shared economic growth. ... U.S. production of renewable fuels ...

As part of the energy transition, some levels of fossil fuel production will continue in the short term, while the demand for critical minerals for renewable energy generation will only increase ...

China's Role in Supplying Critical Minerals for the Global Energy Transition 2 Executive Summary The world faces major challenges in responsibly sourcing large quantities of minerals that

The abundance and low seasonality of Africa's renewable energy position it to reliably provide considerably cheaper renewable base load to continuously power industrial production. Providing the ...

First, AI can help focus and adjust adaptation strategies. Because uncertainty is high and extreme events are paramount, policymakers, firms, and households will not know where to act nor what ...

The first episode of season two of Climate Sense, hosted by Samantha Gross, is all about hydrogen. Hydrogen will have an important role in a zero-carbon energy system, enabling decarbonization of ...
