

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

How many business models are there for energy storage technologies?

Figure 1 depicts 28 distinct business models for energy storage technologies that we identify based on the combination of the three parameters described above. Each business model, represented by a box in Figure 1, applies storage to solve a particular problem and to generate a distinct revenue stream for a specific market role.

Are energy storage business models fully developed?

Even though the business models are not yet fully developed, the cases indicate some initial trends for energy storage technology. Energy storage is becoming an independent asset class in the energy system; it is neither part of transmission and distribution, nor generation. We see four key lessons emerging from the cases.

Is it profitable to provide energy-storage solutions to commercial customers?

The model shows that it is already profitable to provide energy-storage solutions to a subset of commercial customers in each of the four most important applications--demand-charge management, grid-scale renewable power, small-scale solar-plus storage, and frequency regulation.

What is a business model for storage?

According to Massa et al. (2017), a business model for energy storage can be characterized by three parameters: the application of a storage facility, the market role of a potential investor, and the revenue stream obtained from its operation.

Can energy storage provide more than one service?

According to the California Public Utilities Commission (CPUC), energy storage is allowed to provide multiple services (American Public Power Association, 2018). The framework prescribes which combinations are permitted and how business models should be prioritized.
