

Business solar energy qld

Why should a business install a solar system in Queensland?

Many Queensland businesses are enjoying the benefits of solar, after choosing to install a solar photovoltaics system (solar system). Benefits of installing a solar system, and generating your own renewable energy, include: possible marketing advantages - increased business use of renewable energy.

How much does solar cost in Queensland?

Small solar systems (less than 3kW) generally cost \$4,000 or less, while 4kW systems or larger will set you back upwards of \$4,400. While that might sound expensive, solar is considerably cheaper in Queensland than in most other states and territories.

What is Queensland Business Energy Saving & transformation (qbest)?

The \$35 million Queensland Business Energy Saving and Transformation (QBEST) program, part of the Queensland Energy and Jobs Plan, supports businesses to purchase energy-efficient appliances and equipment, smart technology and energy management systems to reduce their energy costs. The program is being delivered in stages from 2023 to 2025.

How many roof top solar systems are there in Queensland?

With more than half a million roof top solar systems installed across Queensland, the state currently leads the nation in solar penetration. But for those who aren't yet on board with the solar revolution, Canstar Blue has put together this guide on the benefits and costs of solar, and how you can find the system best suited for you.

How do business solar rebates work in Australia?

In Australia, the Government incentivises you to switch to commercial solar with Business Solar Rebates that allow your business to generate Renewable Energy Certificates (RECs). These certificates can be sold to energy producers, who use them to meet their Government-mandated carbon targets.

Is commercial solar right for your business?

With energy costs on a continual upward trajectory, commercial solar is the best way to protect your business from price hikes. While a commercial solar system has an upfront cost, it will eventually pay for itself through energy savings over time.
