Connecting a solar panel to an inverter involves using a solar charge controller to regulate energy flow. This controller converts the panel's DC output into AC power suitable for the inverter.

Solar panels connect to the main panel or breaker box through wire that first passes through the charge controller and the inverter. Once the inverter converts the current from DC to AC, the energy from the panels can enter the main breaker box and supply power to appliances.

The number of solar panels you can connect to your inverter is identified by its wattage rating. For example, if you have a 5,000 W inverter, you can connect approximately 5,000 watts (or 5 kW) of solar panels. Using 300 W solar panels, you could then connect roughly 17 solar panels (5000 W / 300 W per panel). ...
