Cooper Power Systems Kearney fuse links can be applied to a variety of applications requiring overcurrent
protection of distribution systems and equipment. When properly coordinated with other overcurrent
protective devices, sectionalizing to isolate faulted feeder branches or equipment can be accomplished.
Kearney fuse links are available in

Cooper power systems fuse links

Eaton's Cooper Power series Bay-O-Net fuse offers a protection package for single- and three-phase transformers. The assembly combines the ease of hotstick operation with the safety of deadfront construction and is used with an isolation link to prevent line personnel from closing into a fault when replacing a blown Bay-O-Net link. Eaton's Cooper Power series MagneX ...

with isolation links from its Cooper Power(TM) series Bay-O-Net type fuse or its Cooper Power series MagneX(TM) interrupter. Isolation links are not fuses and do not have an interrupting rating. During a transformer failure, the isolation link will melt so that the opened primary circuit of a faulted transformer cannot be re-energized by the line ...

thermal characteristics of typical Cooper Power Systems transformers. Recommended fuses meet inrush requirement of 12 times transformer full load current for 0.1 second. Bay-O-Net fuse links alone should not be used at voltages greater than 17100 V for delta configurations or 24940 gnd Y/14400. For applications through 23 kV
