A bridge crane is often used in a complex environment and is often subject to the interference of all loads. Some uncertain factors often have an inevitable impact on its swing. So the force situation of the bridge crane

during a working cycle is analyzed, and a three-dimensional dynamic mathematical model of the bridge crane is built. Through the simulation ...

To recover the potential energy of the mobile crane winch system and reduce engine pollution, considering the good control characteristics of the electric motor/generator ...

Load sway or swing, on cranes, is basically a pendulum effect where the load moves independently of the crane. This does not always matter whilst the load is in the air, although significant swing may affect the load radius and hence the stability of certain cranes, it becomes of great significance when the crane operator is trying to land the load accurately.

to optimise the energy flow in RTG cranes network system by using optimal power management strategies or an MPC controller. Pietrosanti et al. [1] present an optimal management strategy for RTG cranes with flywheel energy storage located at the DC side of the crane. The control strategy aims to find the optimal

In this paper, a kind of anti-rolling device for crane is studied, which could use the weight as the power. ... [Show full abstract] 1/4, 1/8, 1/16, 1/32 and 1/64 for standerd swing energy, have ...

Once the hook or lifting device has been connected to the load, the crane operator starts the lifting operation. If side pull is detected, Hook Centering activates. Lift delayed until load centered. While the crane operator continues with the hoist-up command, the crane automatically positions its trolley and bridge over the load.

the inventive crane swing warning system (which is composed of four each of the crane swing warning devices) establishes a highly visible perimeter caution system around the crane's swing radius. It uses warning tape 31, a lightweight plastic ribbon, supported in spaced relation, by four each of the inventive crane swing warning devices 16, which all move in concert with the upper ...
