### **Custom furnace backup power**

If our power went out that would mean no heat: our furnace burns natural gas but needs electricity to run. We don't have a fireplace or other simple heating backup, and our normal approach if our furnace broke would be electric heaters. I measured our furnace, including circulator pumps, as drawing 1.7-3.6A depending on how many zones were running.

In addition to standard designs, we also manufacture furnaces custom built to exact specifications. Our team of highly knowledgeable Sales Engineers will work with you through the entire process of configuring your custom furnace. The furnaces can be supplied with material load - unload manipulators or various vibrating or auger type material feed equipment. Designs are available ...

When power fails, the ups will get power from the inverter and battery. Connect your "smart" LiFePO4 battery charger to regular AC. The charger will charge the battery to full when there is AC mains, and shut off. If/when power fails, the battery will run the inverter and ups and furnace. When power comes back the battery will be recharged.

It is safe that it can"t connect the load (the furnace) to the power grid and the standby source at the same time. I use sixteen 8C6V floor scrubber deep discharge batteries in a series parallel connection to power a 1000 watt true sinewave inverter at 12 volts to produce 120v.a.c. to run the furnace. It is just like a LARGE computer back up ...

In the event of a prolonged power outage I would remove the filter to allow it to move as much air as it can with convection. My concerns are how hot the air will be coming out of the furnace and if the duct and floor register will be too hot. With power the blower has 3 speed settings and the temperature it kicks on can be

EVExtend is a maker of electric vehicle accessories for personal and commercial use. Our 120V/240V Home Backup Power System can replace the need for a large backup generator for a home, without all the noise, pollution, and maintenance required from a typical combustion based generator. And unlike a generator, it can even act as an uninterruptible power supply.

The easiest way to deliver backup power to your furnace is to replace the breaker box with a receptacle and a plug. To do this, you need a plug set, including a receptacle and a cord with a male plug. You"ll also need a generator cord or a 14 gauge 15 amp extension cord attached to a female plug. ...
