

What is an electrical transient?

1. Power System Switching Transients An electrical transient occurs on a power system each time an abrupt circuit change occurs. This circuit change is usually the result of a normal switching operation, such as breaker opening or closing or simply turning a light switch on or off.

How to analyze electromagnetic transients in power components?

4.1. Introduction The analysis of electromagnetic transients in power components has to consider that electrical parameters are distributed. During a transient phenomenon, only the conductors whose lengths are short, when compared to the significant wavelengths in the phenomenon, can be represented by lumped-parameter models.

How are transients in power systems analyzed?

Transients in power systems were initially analyzed with network analyzers. Since the release of the first digital computers, a significant effort has been dedicated to the development of numerical techniques and simulation tools aimed at solving transients in power systems.

What causes power system transients?

Power system transients can be caused by faults, switching operations, lightning strokes or load variations. The importance of their study is mainly due to the effects the disturbances can have on the system performance or the failures they can cause to power equipment.

How to analyze switching transients in linear systems?

Both, the closing and the opening of a switch introduce a change in the system structure that can cause overcurrents and overvoltages. The analysis of switching transients in linear systems can be made by applying the superposition principle. Section 3 introduces some fundamental concepts for analysis of switching transients in linear systems.

What causes a transient circuit?

This circuit change is usually the result of a normal switching operation, such as breaker opening or closing or simply turning a light switch on or off. Bus transfer switching operations along with abnormal conditions, such as inception and clearing of system faults, also cause transients.
