40. Energy Density Calculation. The energy density gives an idea about how much energy can be stored per unit weight in the battery: ED = E / W. Where: ED = Energy density (Wh/kg) E = Total energy stored in the battery (Wh) W = Weight of the battery (kg) For a battery storing 5000Wh of energy and weighing 50kg: ED = 5000 / 50 = 100 Wh/kg 41.

Therefore, the energy stored in this capacitor is 0.0072 joules (J). Through this example, we can see how the energy storage equation is applied to calculate the energy stored in a capacitor, given its capacitance and the voltage applied across it.
