Key-Words: - Flywheel energy storage system, ISG, Hybrid electric vehicle, Energy management, Fuzzy logic control 1 Introduction Flywheel energy storage system (FESS) is different from chemical battery and fuel cell. It is a new type of energy storage system that stores energy by mechanical form and was first applied in the field of space industry.

The purpose of the device storing elastic potential energy in a vehicle is making the use of energy to move it more efficient as the device can store excess energy and provide energy when needed. This will make energy storage in a spring for later use possible when riding at high speed and then braking, not to waste energy in friction brakes, in contrast to what regularly happens; in ...
