factors driving the transition from recent storage deployments with 4 or fewer hours to deployments of storage with greater than 4 hours.

In the power sector, battery storage is the fastest growing clean energy technology on the market. The versatile nature of batteries means they can serve utility-scale projects, behind-the-meter storage for households and businesses and provide access to electricity in decentralised solutions like mini-grids and solar home systems.

Many people see affordable storage as the missing link between intermittent renewable power, such as solar and wind, and 24/7 reliability. Utilities are intrigued by the potential for storage to meet other needs such as relieving congestion and smoothing out the variations in power that occur independent of renewable-energy generation.
