How can advanced energy storage systems be safe?

The safe operation of advanced energy storage systems requires the coordinated efforts of all those involved in the lifecycle of a system, from equipment designers, to OEM manufacturers, to system designers, installers, operators, maintenance crews, and finally those decommissioning systems, and, first responders.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

What does the Energy Storage Association do?

As America expands its reliance on advanced energy storage systems, the U.S. Energy Storage Association continues to lead these prevention and response efforts with policymakers, codes and standards bodies, and other stakeholders to maximize the safe and effective use of energy storage technologies to help modernize U.S. electric grids.

Do energy storage systems need a CSR?

Until existing model codes and standards are updated or new ones developed and then adopted, one seeking to deploy energy storage technologies or needing to verify an installation's safety may be challenged in applying current CSRs to an energy storage system (ESS).
