

In this work, a novel hybrid system based on absorption-recompression refrigeration system, compressed air energy storage (CAES) and wind turbines is proposed for using in retail buildings.

Fig. 1 The heat balance model of refrigeration storage Cold storage refrigeration system load generally includes: (a) heat transfer of enclosure structure; (b) heat dissipation of goods stored in the cold storage; (c) cooling of cold storage equipment. The cooling load of refrigeration system can be calculated by Formula (1):

A large amount of heat in the energy storage system has not been fully utilized. ... Figure 1 illustrates the structure of the AA-CAES-CHP system, featuring three-stage compression and expansion. The system ...

Latent heat storage is one of the most promising TES technologies for building applications because of its high storage density at nearly isothermal conditions [5]. Latent heat storage relies on the use of phase change materials (PCMs), such as paraffin waxes, fatty acids, salt hydrates and their eutectics [6, 7]. These materials can store large amounts of thermal ...

Li et al. [7] reviewed the PCMs and sorption materials for sub-zero thermal energy storage applications from  $-114\text{ }^{\circ}\text{C}$  to  $0\text{ }^{\circ}\text{C}$ . The authors categorized the PCMs into eutectic water-salt solutions and non-eutectic water-salt solutions, discussed the selection criteria of PCMs, analyzed their advantages, disadvantages, and solutions to phase separation, ...

However, rectifiers with complex structures are indispensable in the  $\text{NH}_3/\text{H}_2\text{O}$  system [16]. ... For this purpose, a novel solar-driven compression-assisted desorption chemisorption refrigeration/cold energy storage system for refrigerated warehouses is specially proposed and designed in this paper. A test bench for the reactor unit tube is ...

The refrigeration system charges the storage unit in the stationary state of the truck, and during operation it provides internal cooling. The proposed prototype shows an energy saving of up to 86.4% compared to the conventional system. Furthermore, it reduces greenhouse gas emissions, while maintaining temperature and reducing heat loss.

Lower efficiency of traditional refrigeration systems in daytime compared with its relatively higher efficiency at nighttime. ... cold energy storage system, electrical chiller and a cooling tower. Multiple operating modes were achieved. ... In the premise that structure and thermal design of TES units and TES integrated cooling systems and air ...

A typical configuration of a solar-powered vapor absorption refrigeration system includes solar thermal

collectors, absorption chiller, mechanical pumps, and an auxiliary ...

The concept of sorption-based TCES can be applied for various applications: short/long-term energy storage, refrigeration system, and domestic hot water supply, industrial heat/cooling, and space heating. ... Absorption is penetration of atoms through the surface that leads to a change in structure or composition of one or both bulk phases ...

The intermittent nature of solar energy is a dominant factor in exploring well-designed thermal energy storages for consistent operation of solar thermal-powered vapor absorption systems. Thermal energy storage acts as a buffer and moderator between solar thermal collectors and generators of absorption chillers and significantly improves the system ...

Heat is a form of energy transferred by virtue of a difference in temperature. Heat exists everywhere to a greater or lesser degree. As a form of energy it can be neither created or destroyed, although other forms of energy may be converted into heat, and vice versa. ... Mechanical refrigeration, is the utilization of mechanical components ...

Energy Efficient Large-Scale Storage of Liquid Hydrogen J E Fesmire<sup>1</sup> A M Swanger<sup>1</sup> J A Jacobson<sup>2</sup> and W U Notardonato<sup>3</sup> <sup>1</sup>NASA Kennedy Space Center, Cryogenics Test Laboratory, Kennedy Space Center, FL 32899 USA <sup>2</sup>CB& I Storage Solutions, 14105 S. Route 59, Plainfield, IL 60544 USA <sup>3</sup>Eta Space, 485 Gus Hipp Blvd, Rockledge, FL 32955 USA Email: ...

Although efforts have been made by Riaz et al. [5], Mousavi et al. [6], Wang et al. [7], and She et al. [8] to improve the round-trip energy efficiency of liquid air energy storage systems through self-recovery processes, compact structure, and parameter optimization, the current round-trip energy efficiency of liquid air energy storage systems ...

In the current era, national and international energy strategies are increasingly focused on promoting the adoption of clean and sustainable energy sources. In this perspective, thermal energy storage (TES) is essential in developing sustainable energy systems. Researchers examined thermochemical heat storage because of its benefits over sensible and latent heat ...

The exergy and energy analysis of a high-capacity liquid carbon dioxide thermal-electrical energy storage system using the ejector refrigeration cycle and the transcritical CO<sub>2</sub> (T-CO<sub>2</sub>) Bryton cycle was proposed by Liu et al. [21]. Al-Nimr et al. [22] developed an integrated structure including an ejector refrigeration cycle, a thermoelectric ...

Investigating a real-scale supermarket refrigeration system at a laboratory level is costly and a complex procedure compared to refrigerated display cabinets and vending machines, although all-in-one CO<sub>2</sub> refrigeration system for supermarkets is explored by Pardi<sup>#241</sup>as et al. [134], [135] considering an

integrated ice storage into the display ...

As the global demand for food increases, the efficiency and environmental sustainability of refrigeration systems have become increasingly critical issues. Cascaded refrigeration systems (CRSs) are widely used in the Chinese food cold chain due to their capacity to meet a wide range of temperature requirements. However, energy consumption of these ...

The exergy and energy analysis of a high-capacity liquid carbon dioxide thermal-electrical energy storage system using the ejector refrigeration cycle and the transcritical CO<sub>2</sub> (T ... respectively. Al-Mahmoud et al. [25] introduced a novel combined desalination and cooling structure using the ejector refrigeration cycle and humidification ...

Efficient design of cold storage system will decrease the cooling load means the load demand of refrigeration system will be reduced. Energy demand for refrigeration systems is one of the prime ...

The compressed air energy storage refrigeration system can store off peak electrical power and then use it efficiently in the peak hours. To analyze the economic performance of this system, its operating cost is evaluated and compared with that of a vapor compression refrigeration system and an ice storage refrigeration system.

This review provides an overview and recent advances of the cold thermal energy storage (CTES) in refrigeration cooling systems and discusses the operation control for ...

The magnetic refrigeration system does not require a low-temperature compressor but uses solid materials as the working medium, so the application of magnetic refrigeration in hydrogen liquefaction has (claimed) potential advantages of low cost, simple and compact structure, light weight, no noise, easy maintenance and no pollution [72].

The energy consumed by the ECS is lower as compared to vapour compression refrigeration system. The ECS can be driven with the help of solar power. ... The pre-cooled air from the IEC is conditioned to provide the required thermal condition by employing the thermal energy storage which uses latent heat. ... Evaporative cooled storage structures ...

This research is of great significance to the in-depth development of hydrate-based refrigeration and cold energy storage system. The proposed system might contribute to minimizing the use of ...

Increasing the proportion of renewable energy is of paramount importance for all countries in the world. In this work, a novel multi-generation system is designed to fully utilize solar energy, which includes a photovoltaic/thermal subsystem (PV/T), an absorption refrigeration cycle (ARC), a proton-exchange membrane (PEM) electrolysis, and a promising pumped ...

18 times higher energy storage than sensible storage systems: Building cooling [83] Plate: 3D - Determination of the effect of the shape of  $c_p(T)$  curves on the cooling power of the TES device: Building cooling [84] Shell-and-tube: 1D: RT 22: The effectiveness of the proposed PCM thermal storage system is generally higher than 0.5. Air ...

This study aims to investigate an innovative hybrid structure of electricity storage at off-peak hours and its application at on-peak hours. In this paper, a novel hybrid system for energy storage ...

The cold thermal energy storage (TES), also called cold storage, are primarily involving adding cold energy to a storage medium, and removing it from that medium for use at ...
