Abstract. The flywheel energy storage system (FESS) is a closely coupled electric-magnetic-mechanical multiphysics system. It has complex nonlinear characteristics, which is difficult to be described in conventional models of the permanent magnet synchronous motor (PMSM) and active magnetic bearings (AMB). A novel nonlinear dynamic model is developed ...

1 Introduction. A high-temperature superconducting flywheel energy storage system (SFESS) can utilise a high-temperature superconducting bearing (HTSB) to levitate the rotor so that it can rotate without friction [1, 2].Thus, SFESSs have many advantages such as a high-power density and long life, having been tested in the fields of power quality and ...
