

Download the bp World Energy app Explore the world of energy from your tablet or smartphone. Customise charts and perform the calculations. Review the data online and offline. Download the app for free from the Apple App Store and Google play store. For 66 years, the BP Statistical Review of World Energy has provided high-quality objective and

Founded on Earth Day in 1998, World Energy is a low-carbon solutions pioneer with a long history of innovation. Our company is built on trust, agility, and the willingness to do hard things. We're here to disrupt the fossil-fuel status quo and help you meet your net-zero goals.

New Energy World embraces the whole energy industry as it connects and converges to address the decarbonisation challenge. It covers progress being made across the industry, from the dynamics under way to reduce emissions in oil and gas, through improvements to the efficiency of energy conversion and use, to cutting-edge initiatives in renewable and low ...

Energy is defined as the ability to do work. Energy comes in various forms--from sonic and gravitational to nuclear and thermal. Understanding these diverse forms of energy helps us comprehend the forces that fuel our natural world and day-to-day activities, from charging our cell phones to powering our homes.

The World Energy Council is the oldest independent and impartial energy community, connecting leaders, industries, governments and innovators across the world. With a presence in over 100 countries, our national Member Committees, partners, programmes and Future Energy Leaders are driving impact and meeting whole energy system challenges. ...

The web page explores the two global energy problems: greenhouse gas emissions and energy poverty. It shows how emissions are linked to income and living standards, and how energy access affects health and environment.

The energy world remains fragile but has effective ways to improve energy security and tackle emissions. Some of the immediate pressures from the global energy crisis have eased, but energy markets, geopolitics, and the global economy are unsettled and the risk of further disruption is ever present.

Let's look at our energy mix today, and explore what sources we draw upon. In the interactive chart shown, we see the primary energy mix broken down by fuel or generation source. Globally we get the largest amount of our energy from ...

The Energy Institute Statistical Review of World Energy - our main data source on energy - only publishes data on commercially traded energy, so traditional biomass is not included. However, modern biofuels are

included in this energy data. Bioethanol and biodiesel - fuel made from crops such as corn, sugarcane, hemp, and cassava - are ...

The IEA projects a major shift towards clean energy technologies by 2030, based on current policy settings, but warns of the challenges for 1.5 °C goal. The report also examines energy security issues, gas markets and ...

The World Energy Outlook, the IEA's flagship publication, provides a comprehensive view of how the global energy system could develop in the coming decades. This year's exceptional circumstances require an exceptional approach. The usual long-term modelling horizons are kept but the focus for this new Outlook is firmly on the next ten years, exploring in detail the impacts ...

The World Energy Outlook covers the whole energy system, using a scenario-based approach to highlight the central choices, consequences and contingencies that lie ahead. It also illustrates how the course of the energy system might be affected by changing key variables, including the energy policies adopted by governments around the world. ...

Company Profile. The growing demand for efficient and clean power generation in the Asia Pacific region presents us with opportunities, where we intend to selectively develop new power generation capacity fuelled by LNG and natural gas in locations where the ability to satisfy increasing local demand is restricted by the limited fuel supply and generation capacity ...

Our Annual Energy Outlook 2023 (AEO2023) explores long-term energy trends in the United States. Since last year's AEO, much has changed, most notably the passage of the Inflation Reduction Act (IRA), Public Law 117-169, which altered the policy landscape we use to develop our projections. ... significant national and international short-term ...

Energy production - mainly the burning of fossil fuels - accounts for around three-quarters of global greenhouse gas emissions. Not only is energy production the largest driver of climate change, but the burning of fossil fuels and biomass also comes at a large cost to human health: at least five million deaths are attributed to air pollution each year.

As the world attempts to transition its energy systems away from fossil fuels towards low-carbon energy sources, we have a range of energy options: renewable energy technologies such as hydropower, wind, and solar, as well ...

2 days ago; New Energy World embraces the whole energy industry as it connects and converges to address the decarbonisation challenge. It covers progress being made across the industry, from the dynamics under way to ...

The WEO is the energy world's most authoritative source of analysis and projections. This flagship

publication of the IEA has appeared every year since 1998. Its objective data and dispassionate analysis provide critical insights into global energy supply and demand in different scenarios and the implications for energy security, climate ...

As the world attempts to transition its energy systems away from fossil fuels towards low-carbon energy sources, we have a range of energy options: renewable energy technologies such as hydropower, wind, and solar, as well as nuclear power. Nuclear energy and renewable technologies typically emit very little CO₂ per unit of energy production and are also much ...

IEA Key World Energy Statistics (KWES) is an introduction to energy statistics, providing top-level numbers across the energy mix, from supply and demand, to prices and research budgets, including outlooks, energy indicators and definitions.

The Energy Institute is, as of 2023, the home of the Statistical Review of World Energy, published previously for more than 70 years by bp. The Statistical Review analyses data on world energy markets from the prior year. It has been providing timely, comprehensive and objective data to the energy community since 1952.
