Flywheel energy storage in action. In June 2011, the Beacon Power Corporation completed the company's first flywheel energy storage plant in Stephentown, New York at a cost of \$60m. The plant utilises 200 flywheels spinning at a maximum speed of 16000 rpm to store excess energy and help regulate the supply to the local grid.

This review presents a detailed summary of the latest technologies used in flywheel energy storage systems (FESS). This paper covers the types of technologies and systems employed within FESS, the range of materials used in the production of FESS, and the reasons for the use of these materials. Furthermore, this paper provides an overview of the types of ...

Today, flywheel energy storage systems are used for ride-through energy for a variety of demanding applications surpassing chemical batteries. A flywheel system stores energy mechanically in the form of kinetic energy by spinning a mass at high speed. Electrical inputs spin the flywheel rotor and keep it spinning until called upon to release ...
