Flywheel Energy Storage System (FESS) Revterra Kinetic Stabilizer Save money, stop outages and interruptions, and overcome grid limitations. Sized to Meet Even the Largest of Projects. ... Advanced flywheel technology. Revterra's system stores energy through a spinning rotor, converting electric energy into kinetic energy and back when needed

The rotor dictates the amount of energy that the flywheel is capable of storing. Due to their simplicity, flywheel energy storage systems have been widely used in commercial small units (about 3 kWh) in the range of 1 kW--3 hours to 100 kW--3 seconds. Energy is stored as kinetic energy using a rotor:  $E = \frac{1}{2} J \omega^2$
