Can gravity storage keep costs down?

Photograph: Peter Dibdin Edinburgh-based energy storage startup Gravitricity has found a novel way to keep the costs of gravity storage down: dropping its weights down disused mineshafts, rather than building towers.

Is gravity a solution to energy storage?

But without an easy way to store large amounts of energy and then release it when we need it, we may never undo our reliance on dirty, polluting, fossil-fuel-fired power stations. This is where gravity energy storage comes in. Proponents of the technology argue that gravity provides a neat solution to the storage problem.

Could a gravity system save energy?

Rather than relying on lithium-ion batteries, which degrade over time and require rare-earth metals that must be dug out of the ground, Piconi and his colleagues say that gravity systems could provide a cheap, plentiful, and long-lasting store of energy that we're currently overlooking.

Gravitricity has developed a gravity-based energy storage system that works by raising heavy weights (up to 12,000 tons) in a deep shaft and then releasing them when energy is required.
