

How does electric company credit solar accounts

Are solar credits worth it?

The credits reduce the owner's electric bills immediately or at a later time. Net metering, available in many states, makes solar more affordable. [MORE: See our picks for the year's best solar companies](#)

Do solar panels generate electricity?

Solar panels only generate electricity when exposed to sunshine, with the most energy production around noon. For example, solar owners away at work may not use all the energy their panels produce during the day, creating a surplus. But with net metering, you can sell excess, unused energy to help lower your electricity bill.

Do solar panels affect my electricity bill?

Your electricity bill with solar panels depends on a few factors, including the size of your system, electricity consumption, net metering policy, and the time of year. In many cases, solar systems can be designed to produce 100% bill offset so the homeowner is only paying for solar electricity or utility electricity - and not both.

How much will a solar system save on my electric bill?

How much you will save on your electric bill with solar depends on seven key factors: Whether your solar system is sized to cover all of your electricity consumption. How many hours of sunlight your home gets. How much your solar panels cost. Whether you leased your solar system, got a loan or paid cash for it.

Do I still have an electric bill after installing solar panels?

Yes, you'll still have an electric bill before and after your solar panels are installed and producing clean energy. However, the balance due on your monthly bills will be much lower - or even negative - because your solar production replaces and offsets the cost of buying grid electricity from your utility.

Do net metering and solar buyback programs offer credit?

Most net metering and solar buyback programs do not issue credit at the full retail rate of electricity. For example, a homeowner typically charged 16 cents per kWh may receive a net metering compensation tariff of only 10 cents per kWh. As mentioned above, net metering policies vary by state and utility company.
