How does home solar power work?

Here's a step-by-step overview of how home solar power works: Excess solar energy is stored in batteries or pushed onto the grid to power local systems (like your neighbor's house!) Now that we've covered the basics, let's break down how solar panels work in more detail. How does solar power work? The photovoltaic effect explained

How do solar panels work?

The free electrons flow through the solar cells, down wires along the edge of the panel, and into a junction box as direct current (DC). This current travels from the solar panel to an inverter, where it is changed into alternative current (AC) that can be used to power homes and buildings. What are solar energy systems & how do they work?

Solar energy systems come in all shapes and sizes. Residential systems are found on rooftops across the United States, and businesses are also opting to install solar panels. Utilities, too, are building large solar power plants to provide energy to all customers connected to the grid.

How do solar panels generate electricity?

The electrons generate an electric current as they flow through the circuit. This electricity is called a direct current (DC). Your solar panels send DC electricity to an attached solar inverter or microinverter. The inverter converts the DC electricity into alternating current (AC).

How does a solar battery work?

AC electricity flows through your home's electrical system to power your major appliances and systems. Any excess electricity is stored in your solar battery, if you have one, or sent back to the grid if your utility allows it. The best performing solar batteries are able to store more power and support your home longer during an outage.

What is a home solar system?

A home solar system, also known as residential solar, is a system that converts sunlight into usable energy for residential properties. It comprises solar panels, inverter(s), and a battery (optional) and is also connected to the main power grid. Solar panels are the heart of a home solar system and function by absorbing available sunlight.
