Why is a charging station so important?

Faster charging times and longer driving ranges are the two most common client demands, and they directly oppose one another. The charging station has to communicate with the vehicle to inform the available power capacity at the station and how fast it can be delivered with adequate safety.

Should EV charging stations be located near each other?

By having FCSs located within a reasonable distance from each other, EV owners can have confidence that they will be able to find a charging station nearby when needed, reducing concerns about running out of battery power. Efficient resource utilization It is important to save resources by preventing FCS from being too closely spaced.

How do you optimize a charging station?
