Stop paying for peak energy charges. With a home battery storage system, you can store up free energy from renewables, or use the grid to charge your battery overnight when energy costs are low. You can then switch to battery power and run your home on low-cost, sustainable energy.

What is grid-scale battery storage? Battery storage is a technology that enables power system operators and utilities to store energy for later use. A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time

For example, you can store electricity generated during the day by solar panels in an electric battery. You can use this stored electricity for powering a heat pump when your solar panels are no longer generating electricity. Battery storage tends to cost around \$5,000 to \$8,000, but will depend on: your current energy use
