

Published in: 2018 IEEE 7th World Conference on Photovoltaic Energy Conversion (WCPEC) (A Joint Conference of 45th IEEE PVSC, 28th PVSEC & 34th EU PVSEC) Date of Conference: 10-15 June 2018
Date Added to IEEE Xplore : 29 November 2018

A methodology to analyse the annual energy losses due to soiling of solar PV modules is developed. It is based on the actual soiling rates observed in Mumbai over a 5 year period, and also on PV system simulations using PVSyst. The impact of different cleaning cycles is also investigated. The impact of module performance degradation on the energy output is also ...

Figures show that more than 98 GW of PV systems have been installed in the world last year. Consequently, cumulative capacity reached approximately 402 GW. Published in: 2018 IEEE 7th World Conference on Photovoltaic Energy Conversion (WCPEC) (A Joint Conference of 45th IEEE PVSC, 28th PVSEC & 34th EU PVSEC)

The photovoltaic industry is driven by manufacturing cost and is continuously working on optimizing its production output. As production sites are increasing significantly in size, large data sets are generated that require adequate processing for line optimization. As in other industries machine learning is one way to address this task. In this study a machine learning algorithm is ...

Over the last decade, the utilisation of renewable energy in the electricity sector, especially from solar, is growing at a much faster pace than the rest of the economy in Europe and world-wide. The significant cost reduction of solar PV power during this time and their zero fuel cost have increased its attractiveness. However, the growth rate in the European Union is declining since ...

Models for predicting photovoltaic soiling ratios are evaluated against soiling values reported in the scientific literature for 20 locations worldwide. These models assume soiling increases linearly over time until the photovoltaic arrays are cleaned or sufficient rain falls. Such models have been used before. The novelty in our approach is in exploring how the soiling rates can be estimated ...

Photovoltaic (PV) modules predominantly are mass manufacturing products with narrow variability. For Building Integration of PV (BIPV) customers and architects demand for a wider product range, particularly in size and color. Additional requirements impose new challenges for development and manufacturing: esthetic quality and uniformity, mechanical strength, shading ...

The PV market has grown strongly in the last year again. More and more solar cell manufacturers focus on high efficiency solar cells with low cost. The industry is moving towards PERC Technology and the cell efficiency has been improving progressively. As the worldwide major PV market, China required since 2017 via "Top Runner" Program high performance cell/module for ...
