We are talking a range of 5-20 times that energy in the storage systems that are going into dwellings in general. However, these batteries are also permanently wired and charging/discharging constantly (which is even different to UPS operation where for long periods they are topped up with charge and monitored for voltage etc.).

For comprehensive details, refer to Section 11, Table 11.1 of the IET Code of Practice, Electrical Energy Storage Systems, 2nd Edition.
