Solar charge controllers and inverters serve distinct roles in a solar power system. While both are essential, they have different functions. A solar charge controller is a device that manages the power going into the battery bank from the solar array. It ensures that the batteries do not overcharge and maintains their longevity.

MPPT solar charge controllers are rated in amps (Output Current). To select a charge controller, you'll need to calculate the maximum amount of current (in Amps) that the MPPT should be able to output. This max output current value is calculated by dividing the maximum system wattage (in Watts) by the minimum charging voltage of the battery bank (in ...
