Lead Acid Battery. Definition: The lead acid battery which uses sponge lead and lead peroxide for the conversion of the chemical energy into electrical power, such type of battery is called a lead acid battery. The lead acid battery is most commonly used in the power stations and substations because it has higher cell voltage and lower cost.

Batteries of this type fall into two main categories: lead-acid starter batteries and deep-cycle lead-acid batteries. Lead-acid starting batteries. Lead-acid starting batteries are commonly used in vehicles, such as cars and motorcycles, as well as in applications that require a short, strong electrical current, such as starting a vehicle's engine.
