

Exploiting and storing thermal energy in an efficient way is critical for the sustainable development of the world in view of energy shortage [1] recent decades, phase-change materials (PCMs) is considered as one of the most efficient technologies to store and release large amounts of thermal energy in the field of architecture and energy conversion [2].

Thermal energy storage (TES) with phase change materials (PCMs) can potentially provide higher volumetric TES capacity when compared to sensible energy storage systems [1], [2] sides, PCMs are well known to be excellent TES materials owing to their advantages such as high fusion latent heat per unit of mass, availability in large quantities, low ...

Highly conductive nanoparticles were proposed to be dispersed into phase change materials (PCMs) such as paraffin wax for heat transfer enhancement. The mixture, often referred to as nanoparticle-enhanced phase change material (NePCM), has been studied extensively for latent heat energy storage but with conflicting results. This study attempts to ...

The storage of energy through different innovative capacitors and otherwise are some of the trending research. In this review, more about polyolefin/wax blend composites are discussed and explored as a potential system of energy. Phase changes and effect of each component in polyolefin/wax blend composites and eventual energy storage are ...

Using paraffin wax, we demonstrate effective energy density and power density of 230 J cm⁻³ and 0.8 W cm⁻³, respectively. ... The performance of thermal energy storage based on phase change ...

Journal of Chemical and Petroleum Engineering, 2016. The present work deals with an experimental investigation of charging and discharging processes in thermal storage system using a phase change material PCM.

Solid-liquid phase change materials (PCMs) have become critical in developing thermal energy storage (TES) technology because of their high energy storage density, high ...

Storage using Paraffin Wax Phase Change Materials . R.R. Thirumaniraj. 1*, K. Muninathan. 2, V. Ashok Kumar. 2 ... The main idea of this work is to design and analyze efficient storage of thermal energy using phase change material. Solar energy is a readily available and renewable source of energy. It is also a clean energy as it does not emit ...

(IJEIT) Volume 3, Issue 2, August 2013 Experimental Analysis of Latent Heat Thermal Energy Storage using Paraffin Wax as Phase ...

The energy stored in the PCM is the sum of the latent enthalpy heat at the phase transition temperature and the sensible heat stored when the temperature changes from the energy storage process. In the phase change process, a considerable amount of energy can be stored in the form of latent heat in the PCM material.

Energy storage mechanisms enhance the energy efficiency of systems by decreasing the difference between source and demand. For this reason, phase change materials are particularly attractive because of their ability to provide high energy storage density at a constant temperature (latent heat) that corresponds to the temperature of the phase transition ...

There are various thermal energy storage methods, but latent heat storage is the most attractive one, due to high storage density and small temperature variation from storage to retrieval. In a latent heat storage system, energy is stored by phase change, solid-solid, liquid-solid or gas-liquid of the storage medium [4]. In terms of ...

Although the large latent heat of pure PCMs enables the storage of thermal energy, the cooling capacity and storage efficiency are limited by the relatively low thermal conductivity ($\sim 1 \text{ W}/(\text{m} \cdot \text{K})$) when compared to metals ($\sim 100 \text{ W}/(\text{m} \cdot \text{K})$). 8, 9 To achieve both high energy density and cooling capacity, PCMs having both high latent heat and high thermal ...

The waste plastics-derived waxes were characterized and studied for a potential new application: phase change materials (PCMs) for thermal energy storage (TES). Gas chromatography-mass spectrometry analysis showed that paraffin makes up most of the composition of HDPE and LDPE waxes, whereas PP wax contains a mixture of naphthene, ...

Thermal Energy Storage (TES) has a high potential to save energy by utilizing a Phase Change Material (PCM) [2] general, TES can be classified as sensible heat storage (SHS) and latent heat storage (LHS) based on the heat storage media [3]. An LHS material undergoes a phase change from solid to liquid, also called as the charging process, and ...

This study investigates the integration of graphene nanoplatelets and nano SiO_2 into paraffin wax to enhance its thermal energy storage capabilities. Dispersing graphene nanoplatelets and nano SiO_2 nanoparticles at weight percentages of 0.5 and 1.0 respectively, in paraffin wax yielded mono and hybrid phase change materials (HYB). Transmission electron ...

5 · This research investigates methods to enhance the efficiency of solar ponds as sustainable energy storage systems by leveraging phase change materials (PCMs) and ...

Research on phase change material (PCM) for thermal energy storage is playing a significant role in energy management industry. However, some hurdles during the storage of energy have been perceived such as less thermal conductivity, leakage of PCM during phase transition, flammability, and insufficient mechanical properties. For overcoming such obstacle, ...

ISSN: 2277-3754 ISO 9001:2008 Certified International Journal of Engineering and Innovative Technology (IJEIT) Volume 3, Issue 2, August 2013 Experimental Analysis of Latent Heat Thermal Energy Storage using Paraffin Wax as Phase Change Material 1 Thirugnanam.C, Marimuthu.P Assistant Professor, Mechanical Department, Syed Ammal Engineering ...

The rocks or ground used as storage medium in this type. The storage by phase change (with no change in temperature) is type of (TES) known as latent heat storage. Latent heat storage systems store energy in phase change materials (PCMs), with the thermal energy stored when the material changes phase, usually from a solid to a liquid.

This Thermal Energy Storage (TES) was further classified based on the ability to store heat into Sensible Heat Storage (SHS), chemical storage, and Latent Heat Storage (LHS) (Lee et al., 2019). Moreover, the most used TES is the Phase Change Material (PCM) which is a material that undergoes a phase change process at a specific working temperature.
