**Microinverter:** Microinverters are also attached to individual panels. They perform both MPP tracking and power conversion at the module level, allowing each panel to output usable AC power. They're good at dealing with shade (like power optimizers), and have the additional advantage of making your solar system easy to expand.

A solar inverter is really a converter, though the rules of physics say otherwise. A solar power inverter converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC.) Most homes use AC rather than DC energy. DC energy is not safe to use in homes. If you run Direct Current (DC) directly to the house ...
