

Power companies pay for solar

Do utilities pay for solar panels?

Some utilities vendors will pay you for the extra power your solar panel system produces. Find out how to take advantage of net metering offers to score some cash from your solar panels. How your utility compensates you for your solar energy can affect your energy savings over time.

How much does my Electric Company pay for excess solar power?

How much your electric company pays for your excess solar power depends on your electricity plan. Because you can't literally sell power back to the grid, you'll be selling it to your retail electricity provider. Some companies will pay you on net metering at a fixed rate per kilowatt hour for your excess power.

Do utility companies benefit from solar energy?

Utility companies also benefit, since the excess solar electricity can be supplied to other buildings on the same electric grid. Generally, you will see more home solar renewable energy systems in places with favorable net metering laws.

How much does solar power cost?

The monthly basis will affect how much the electric company pays for solar power. For example, the current up-rate for November is \$.03988 (.40 cents) per kilowatt. If you sell this electricity back to SDGE, they will credit you to your account at .40 cents a kilowatt.

Can you sell solar power to a utility company?

If you are generating solar power by installing a solar plant on your home or business building, you can sell it to a utility company and generate your income. But you can't sell it directly to sell energy. You can sell the extra energy generated after using this solar power system for your home and then sell power back to the grid.

Can I get a credit for solar power?

Many electric companies can apply a credit to your monthly bill if you are generating more electricity than you use in your solar panels in your home or business space. The monthly basis will affect how much the electric company pays for solar power. For example, the current up-rate for November is \$.03988 (.40 cents) per kilowatt.

Under net billing, solar energy that is used to power the home's appliances directly reduces the homeowner's electric bill by the full retail cost of electricity, but energy that is sent to the grid is credited at a lower rate.

The short answer is--yes, many utility companies do pay for excess solar energy. However, the details vary depending on where you live and which utility company serves your area. How much you can earn by selling

...

Power companies pay for solar

It may seem like a dream too good to come true. Electric companies pay the same amount to buy electricity as you do. They generate the energy they supply to you by burning coal and natural gas, but solar panels let you convert the sun's energy into power with no side effects. Residential electricity in Colorado costs 11.46 cents per kilowatt-hour (c/kWh) whether you pay ...
