

Power gear leveling system manual

Do all power gear leveling systems have manual override valves?

Not all Power Gear leveling system pumps have manual override valves. Power units for double acting systems that have manual override valves have flexible rubber caps on the valves and a hex override nut under the button cap on the electric motor.

Can I use the power gear electronic leveling system to support a coach?

The use of the Power Gear Electronic Leveling System to support the coach for any reason other than which it is intended is prohibited by Lippert's limited warranty. The Power Gear leveling system is designed as a "leveling"... Safety Read and understand all instructions before installing or operating this product. Adhere to all safety labels.

How do I set up the automatic leveling system?

Push the "AUTO" button. The automatic leveling system will begin its leveling procedure. Please avoid movement in the coach during automatic leveling as it can cause errors in the results. It will signal that it has completed the process by illuminating the center green "LEVEL" light. Check to make sure that all jacks are on the ground.

What type of hydraulic fluid does a power gear system use?

Hydraulic Fluid Recommendation The Power Gear Electronic Leveling System is pre-filled, primed and ready to operate direct from the manufacturer. Type "A" Automatic Transmission Fluid (ATF) is utilized and will work. ATF with Dexron III[®]; or Mercon 5[®];

Where can I get power gear warranty service?

For service contact your nearest Power Gear authorized warranty service facility. Warranty service can be performed only by a Power Gear authorized service facility. This warranty will not apply to service at any other facility. At the time of requesting warranty service, evidence of original purchase date must be presented.

What fluid should I use for power gear hydraulic jacks?

Mercon Vis also recommended as an alternative fluid for Power Gear hydraulic systems. If operating in cold temperatures (less than -10[°]F) the jacks may extend and retract slowly. For cold weather operation, fluid specially-formulated for low temperatures may be desirable.

To troubleshoot a Power Gear leveling system, follow these steps: calibrate the zero point into the controller, ensure correct mounting with the arrow facing the front, test for voltage drop between the controller and jack valve, ...
