

What is the Valjoux 7750 movement?

In layman's terms, the movement pertains to the gears that make your watch tick. It's like the engine that powers your timepiece. If you dig in a little deeper, you would notice that most watch enthusiasts are partial to the Valjoux 7750, also known as "the world's greatest chronograph movement".

Why was the 7750 so popular?

The architecture of the 7750 lent itself to easier mass-production than did column wheel calibres -- but by the mid-'70s quartz was king and there wasn't the call for a high volume of mechanical chronographs and the movement remained largely dormant.

What is the ETA 7750 movement?

That movement is the ETA 7750 or, as it was formerly and still commonly known, the Valjoux 7750. It is a movement that inspires heated debate among watch connoisseurs, equally revered and ridiculed. But no one can deny the impact this movement has had on the watch industry.

How does a 7750 start-stop-reset work?

The start-stop-reset functions of the chronograph are controlled by a layered switching cam, which is manufactured through a simple stamping process, similar to many other parts of the 7750 movement. This cam is responsible for making and breaking the connection between the movement and the chronograph.

What is Valjoux ETA 7750?

Since the takeover of Valjoux by ETA the movement is also called ETA 7750. This calibre is still produced and is probably the most successful automatic chronograph movement of all times. It serves as basis for several superstructures or modules, including many from other manufacturers.

Does a 7750 have a stop lever?

The reset lever (stop lever) on the central chronograph wheel is constructed from plastic on many 7750s. Chronoswiss was the first watch company to start using a metal stop lever, which ETA subsequently began using as well. According to ETA, the parts made from plastic should not be cleaned during a service.

# Power storage of lebanon 7750 movement

Any watch connoisseur worth their salt knows that the Valjoux 7750--now known as ETA 7750--is probably the most popular automatic chronograph movement of all time. First introduced during the 1970s, at the peak of the quartz crisis, the movement offers a durable and inexpensive design, which is quite easy to mass-produce.

The Valjoux 7750 is one of the most famous chronograph movements in the world. Now owned by ETA (Swatch Group), it is regarded as the typical workhorse chronograph movement. A cam and lever system operates the chronograph function as opposed to a column-wheel. ... thus only brands with enough spending and production power can manage to keep it ...

IWC caliber 7922 is a Swiss made automatic chronograph watch movement with 25 jewels. The base movement is an ETA/Valjoux 7750 is adjusted to five positions.. Isn't it just a 7750? Many brands use the ETA caliber 7750 to power their automatic chronograph models, but it appears that IWC has gone to great lengths to communicate what they feel separates their use of base ...

The transformation of Calibers. Many watch makers today have given both the cal. 7750 and 7753 additional finishing or extra complications; for example, Hamilton transformed the 7750 into H-21 and Raymond Weil created the Caliber RW5000 automatic chronograph movement out of it, the latter being a redecorated (black, PVD-treated oscillating weight) ...

Join Massdrop for the Fiyta chronograph. Most agree that it uses a modified Shanghai 3LZF2 movement (7750) which allows for 45 minutes counter rather than traditional 30 mins. I already bought one of the stainless steel models which is cheaper than the others because it is unlimited production series and it was \$350 USD for an automatic ...

I bought a new ETA 7750 and replaced the asian of my SMP. The movement is loosing 4 minutes per day. I read other post about adjusting the asian 7750's but no information about original swiss ETA. The movement has a calibrating lever (marked with + and -) and the pointer is near the &quot;-&quot; mark.

That movement is the ETA 7750 or, as it was formerly and still commonly known, the Valjoux 7750. It is a movement that inspires heated debate among watch connoisseurs, equally revered and ridiculed. ... ETA itself now provides its Swatch Group sister brands with upgraded and more modern variants with features like longer power reserves, but ...

The Valjoux 7750 was created in the early 1970s as the company's answer to the advent of the automatic chronograph, to catch pace with its competitors following the introduction of movements such as the Zenith El Primero, the Heuer/Hamilton/Breilting Calibre 11 or the Lemania 1040. Indeed, if chronograph wristwatches have existed since the beginning of ...

The same is true for the caliber "7750". The four-digit code stands for the chronograph caliber with coulisse-lever escapement from Valjoux (named after its origin, the Vallée de Joux). With a power reserve of 42 hours and a frequency of 28,800 vibrations per hour, at first glance, the movement does not knock you off your feet.

Currently there are two Chinese manufacturers producing 7750 clones: Shanghai (3L series) and Liaoning

# Power storage of lebanon 7750 movement

Peacock (4 series). Quite a few years ago I had the opportunity to sample various versions alongside a watch with an ETA 7750 movement. Unfortunately the Chinese watches were of the kind that are supplied with an unoled movement.

Gerber used the 7750 as a base caliber, then added a second spring barrel to power the alarm, which was also wound by the movement's rotor, which was slightly enlarged and made heavier to wind two barrels efficiently. To create room for all this, Gerber raised the rotor 1.5 mm higher. This movement, named F-2001, was launched in 1998.

History. The 7750 is derived from the manually-wound Valjoux 7733 chronograph movement, itself a descendent of the Venus 188, a company Valjoux purchased in 1966 was designed (partially on computer, an industry first) by Edmond Capt.. Introduced on July 1, 1974, at the height of the quartz crisis, the 7750 was released five years after the race ...

The movement below is a clone of the ETA 7750. I disassembled it following the instructions of Eta's Swisslab online tool. As far as I can tell, the Chinese did not bother to give it a name and it is referred to on forums as the Asian 7750. ... On the left of the chronograph seconds wheel, at the end of a lever, there is the small pinion ...

I had a selection of older 7750, from the late 1980's early 1990's, all of these were plus or minus 30 minutes of the published reserve. Mainsprings, even the "unbreakable" one do creep slightly. This changes the power reserve. Note, there will be about a 20% drop in power reserve if the chronograph is run continuously.

The below is a re-post from RWG1.1 so thanks to greg\_r The 7750 is probably the most-discussed movement on the rep boards. Partly because of the notorious issues with the secs@6 movements (now a little improved with the latest version), but also because it has built a reputation for being less reliable than other movements.
