## Does magnetic flux decompose a quantum work functional?

The equality reveals a decomposition on the source of the free energy change: one is the quantum work functional, and the other emerges from the magnetic flux passing through a closed loop of propagators. The result suggests a distinct quantum effect of magnetic flux and supports to extract additional free energy from the magnetic field.

#### Why does a magnetic flux emerge in the free energy equality?

A magnetic flux emerges in the free energy equality as a natural consequence of using the quantum work functional 31,thus uncovering the source of the amplification. For the open quantum system, the amplification can be suppressed by dissipation.
