

Scotch backup camera obd2 convert power cable

Do I need an OBD port for a dual dashcam?

No problem when you need to use the obd port just pull out the adapter and plug in the scanner. You will not be taxing the power of the OBD port, which is meant to supply up to 4 amps even the dual dashcams spec out at 2 amps or below. I see the OBD port as a great and easy hook up for dash cams.

Can I feed a camera from the OBD 2 port?

Great answer! No, it's not a good idea to feed the camera from the OBD 2 port. Use the feed for the cigar lighter or another switched feed - fused with the capacity for what the camera will demand. Thanks for the answer but my car is a lease so I can't make alterations.

Can a cigarette lighter be plugged into an OBD 2 port?

Just use a cigarette lighter USB power adapter, and plug it into the port. @axa while some cars may not come with a cigar lighter any more, it is still not a good idea to feed a camera or any other accessory device from the OBD 2 port. Another source should be found without causing any damage.

Does the OBD2 power adapter automatically switch to parking mode?

The OBD2 power adapter will not automatically switch your DC to parking mode, it will just keep running as if you were driving. The g-sensor should still lock a file if you were hit but it probably uses more power. It also may run your battery down completely if you left it sitting for days.

Does the iroad OBD-II power adapter have a data link connector?

See the "Parking Mode Conditions" in my list. The answers to #2 & #3 are yes and yes. The IROAD OBD-II power adapter only has two pins 4 (ground) and 16 (power). There's no monitoring of any of the vehicle's various data busses present in the data link connector.

Does a data link connector work with OBD-II?

If the vehicle's data link connector has the same shape as the OBD-II data link connector and has power present on pin 16 and a ground on pin 4 then it should work.

?Universal OBD and OBD2 Power Adapter??- The charging cable plugs into your car stock OBD or OBD2 port directly. You don't need to take power from car battery or fuse box and cigarette lighters.
