

# Solar city power outage

Why do solar panels not work during power outages?

When solar panels do not have an energy backup system, they cannot work when disconnected from the grid for several reasons. In this article, we analyze the different solar systems types, explain why panels shut down during power outages, and we provide you with the best solution to this problem. Why Solar Panels Do Not Work During Power Outages?

Why are solar panels shut-down in 2020?

In 2020, U.S. electricity customers experienced an even higher increase in power outages when compared to 2019. During these power outages grid-tied solar systems are shut-down. This is a regulation that utilities set in place for several electrical security and stability reasons:

Can solar panels and batteries keep your home running during a power outage?

By creating your own little "island" of a home with solar panels and batteries, you can run essential appliances for days during a power outage. Read on to learn more about how to keep your home running during a power outage.

What happens if a solar panel goes out?

While your solar panels generate electricity for your home, if you aren't using as much as you're producing, the power gets sent to the grid (which allows you to participate in net metering programs). During a power outage, utility workers are sent to fix the problem.

Does having a solar panel system reduce your vulnerability to power outages?

It's only natural to wonder if having a solar panel system also reduces your vulnerability to power outages. Unfortunately, the answer is most likely no. There are ways--like batteries and home storage solutions--to upgrade your solar system to keep your lights on if the power goes out, but they are not generally the default design option.

Will solar power outages increase in 2020?

From 2017 to 2019, power outages increased when compared to 2013 - 2016. In 2020, U.S. electricity customers experienced an even higher increase in power outages when compared to 2019. During these power outages grid-tied solar systems are shut-down.
