What is solar energy?

Solar energy is the radiation from the Sun capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy received on Earth is vastly more than the world's current and anticipated energy requirements. If suitably harnessed, solar energy has the potential to satisfy all future energy needs.

Is solar power renewable?

Solar power is renewable by nature. Sunlight is infinite, and enough solar radiation hits the planet's surface each hour to theoretically fill our global energy needs for nearly a year. No matter how much solar power we use to generate electricity, the sun will continue to shine. It doesn't deplete.

Is solar energy a good choice?

Sunlight must be abundant and consistent for solar energy to be an efficient choice. In most places on Earth, sunlight's variability makes it difficult to implement as the only source of energy. The Agua Caliente Solar Project, in Yuma, Arizona, United States, is the world's largest array of photovoltaic panels.

Are solar panels a good investment?

Homes or businesses that install successful solar panels can actually produce excess electricity. These homeowners or business owners can sell energy back to the electric provider, reducing or even eliminating power bills. The main deterrent to using solar energy is the required equipment. Solar technology equipment is expensive.

What is solar power & why is it important?

Solar power, form of renewable energy generated by the conversion of solar energy (namely sunlight) and artificial light into electricity. In the 21st century, as countries race to cut greenhouse gas emissions to curb the unfolding climate crisis, the transition to renewable energies has become a critical strategy.

How does solar energy affect life on Earth?

Solar energy drives and affects countless natural processes on Earth. For example, photosynthesis by plants, algae, and cyanobacteria relies on energy from the Sun, and it is nearly impossible to overstate the importance of that process in the maintenance of life on Earth.
