What types of batteries are used in residential solar systems?

Lithium-ion batteriesare the most common type of battery used in residential solar systems,followed by lithium iron phosphate (LFP) and lead acid. Lithium-ion and LFP batteries last longer,require no maintenance,and boast a deeper depth of discharge (80-100%). As such,they've largely replaced lead-acid in the residential solar battery market.

Are solar batteries a storage unit?

At its core,a solar battery functions as a storage unitfor energy collected by solar panels during daylight hours. But to merely label it as a 'storage unit' would be an oversimplification of its capabilities and significance. Solar batteries are designed specifically to store energy harnessed from the sun.

Are lithium iron phosphate batteries a good choice for home solar storage?

Yes,lithium iron phosphate (LFP) batteries technically fall into the category of lithium-ion batteries,but this specific battery chemistry has emerged as an ideal choice for home solar storage and therefore deserves to be viewed separately from lithium-ion. Compared to other lithium-ion batteries,LFP batteries:
