With the rise of solar and wind capacity in the United States, the demand for battery storage continues to increase.

Net metering is an arrangement between solar energy system owners and utilities in which the system owners are compensated for any solar power generation that is exported to the electricity grid. The name derives from the 1990s, when the electric meter simply ran backwards when power was being exported, but it is rarely that simple today.

Used to augment traditional power generation; There are exciting residential, commercial and industrial behind-the-meter applications. Consumers with rooftop solar panels can store excess energy using a BESS, and then have that power available as a backup. ...
