Keywords: Flywheel Energy Storage System, Rotor Dynamics, Critical Speed, Magnetic Bearings and Finite Element Method. 1. INTRODUCTION FESS(Flywheel Energy Storage System) is a kind of mechanical energy storage system which can store electric energy in the form of kinetic energy and convert kinetic energy to electric energy again when necessary.

A subcritical or supercritical rotor is often employed to improve the energy storage efficiency of flywheel systems. Consequently, it is necessary to introduce Squeeze film dampers (SFD) in the rotor-bearing system to suppress the lateral vibration of the rotor. Although the dynamic behavior of the rotor-bearing system can be investigated in a timely manner with ...
