Solar panels are extremely efficient at converting sunlight into electricity. The efficiency of solar panels depends on several factors such as the size of the panel, how much light hits the panel, and whether the sun is

shining directly overhead. If you live in a sunny area, then solar energy may be a great option for powering your home.

A 100-watt solar panel installed in a sunny location (5.79 peak sun hours per day) will produce 0.43 kWh per day. That"s not all that much, right? However, if you have a 5kW solar system (comprised of 50 100-watt solar panels), the whole system will produce 21.71 kWh/day at this location. This might be enough to cover 100% of your electricity ...

Homeowners can earn compensation for the solar energy their panels generate through the Solar Renewable Energy Certificate (SREC) marketplace, providing an additional avenue for financial return on investment.
