That's essentially what synchronous grid-forming technology can do for the electrical grid. Case study: Cape Cod Energy Storage Facility . Late in 2021, SMA commissioned a first-of-its-kind, 57.6 MW synchronous grid-forming energy storage facility which would not have been allowed to interconnect otherwise.

We estimate that by 2040, LDES deployment could result in the avoidance of 1.5 to 2.3 gigatons of CO₂ equivalent per year, or around 10 to 15 percent of today's power sector emissions. In the United States alone, LDES could reduce the overall cost of achieving a fully decarbonized power system by around \$35 billion annually by 2040.
