What is energy storage?

Energy storage is an indirect measurement of the volume of the components. According to , 2 L and 3 L converters have an energy storage requirement in the dc-link between 2 and 4 J/kVA. where I_n , N , and V_{dc} designate the nominal arm current, number of cells per arm, and average operating voltage of the capacitor, respectively.

What is the energy storage requirement for 2 L & 3 L converters?

According to , 2 L and 3 L converters have an energy storage requirement in the dc-link between 2 and 4 J/kVA. Therefore, both 2 L and 3 L presented equal stored energy requirements in the dc-link capacitor around 4000 J. For the inductor, the stored energy is 360 J and 1050 J for 2 L and 3 L, respectively.
