

Water as a Tool. WOMA Research Group is a leading manufacturer of high-pressure plunger pumps, ultra-high pressure (UHP) systems, and water tools. Through our focused research and development, WOMA has mastered systems with water pressures in excess of 58,000 psi (4,000 bar), which is four times the water pressure at the deepest point in the ...

Hydrogen energy vehicles often use high-pressure gas hydrogen storage mode, through the gaseous hydrogen and oxygen in the air react to generate water, to achieve pollution-free zero emissions. At the same time, the electric energy generated by chemical reaction is used to drive the car.

Second, we can design high pressure systems in which the heat and cold from compression and expansion are used for household applications. Small-scale, High Pressure. Small-scale compressed air energy storage systems with high air pressures turn the inefficiency of compression and expansion into an advantage.

Hydrogen energy is an extremely important energy carrier because of its non-polluting nature, excellent efficiency and substantial energy density (142 MJ/kg^{-1}) [1]. Hydrogen storage technology and transportation are the main issue to realize of hydrogen energy utilization [2]. Due to the formation of van der Waals interactions among micropore-mesopores and ...

WASHINGTON, D.C. -- The U.S. Department of Energy (DOE) today announced \$15 million for 12 projects across 11 states to advance next-generation, high-energy storage solutions to help accelerate the electrification of the aviation, railroad, and maritime transportation sectors. Funded through the Pioneering Railroad, Oceanic and Plane ...

Ultra-high-pressure homogenisation (UHPH) is a novel technology with applications in the processing of fluids. While the technology is based on conventional ball-and-seat homogenisers, developments in valve design and materials have enabled pressures of 400 MPa to be achieved. The benefits of UHPH include shelf-life extension through inactivation of ...

Hydrogen is poised to play a key role in the energy transition by decarbonizing hard-to-electrify sectors and enabling the storage, transport, and trade of renewable energy. Recent forecasts ...

Reducing the CO₂ emissions is becoming a major engineering challenge given the increasing world population, and the growing demand of energy. Generation of electricity with renewable energies, or with fuel cells can contribute to reduce the global warming (Barnoon, 2021, Barnoon et al., 2022, Mei et al., 2022). However, due to the mismatching between ...

removed using high water pressure. Because water gets into practically every small general surface cleaning

Ultra-high pressure water energy storage

01 02 03 01_With the WOMA® FloorMaster, large floor spaces can be cleaned quickly and safely.
02_The removal of erosion and cleaning of every kind is possible with help from the high water pressure gun.
03_Rubber and other

Ultra High Pressure Water Blasting (UHP Water Blasting) is a widespread water discharge operation with High Pressure (20K PSI Waterblaster). In most cases, because of its efficiency, Ultra High Pressure Water Blasting Equipment will require only one operator for ...

This nanopore storage material, according to the study, delivers a mass fraction of 21.7% - so it carries twice the energy per weight that gaseous H₂ in tanks does, but a cryogenic liquid system ...

The Energy Bag was re-deployed and cycled several times, performing well after several months at sea. Backed up by computational modelling, these tests indicate that Energy Bags potentially offer cost-effective storage and supply of high-pressure air for offshore and shore-based compressed air energy storage plants.

Any ultra-high pressure device consists of a high-pressure tank (chamber) and a powerful pump; it can also have a device for heating or cooling [17]. In economic terms, food products (usually juices) high pressure continuous processing systems are most attractive. Liquid products occupy 100% of the working chamber volume,

Study on output pressure prediction and jetting features of ultra-high pressure water jet for the downhole intensifier Hualin Liao 1, Huajian Wang, John-Paul Latham2, ... Geothermal energy is a kind of clean energy with abundant energy storage and wide distribution. Due to low pollution, renewable, stable production capacity and long service ...

ultra-high water head pumped storage projects [40]. The application of ternary pumped storage units can effectively improve the regulation capacity and flexibility of the power grid.

Energy management strategy is the essential approach for achieving high energy utilization efficiency of triboelectric nanogenerators (TENGs) due to their ultra-high intrinsic impedance. However ...

Hydrogen is poised to play a key role in the energy transition by decarbonizing hard-to-electrify sectors and enabling the storage, transport, and trade of renewable energy. Recent forecasts project a thousand-fold expansion of global water electrolysis capacity as early as 2030. In this context, several electrolysis technologies are likely to coexist in the market, each catering to ...

The impacts of four treatments, ultra-high hydrostatic pressure (UHP), high-pressure homogenization (HPH), combined UHP + HPH (U-H), and HPH + UHP (H-U), on bighead carp (*Aristichthys nobilis*) myofibrillar protein (BMP) structure, functional hydrolysis property to pepsin, and antioxidant activity of hydrolysates were investigated. All treatments led ...

The water electrolyzer is one of the three key elements of energy storage systems based on hydrogen energy technologies. In this paper, a modern type of high pressure alkaline water ...

The Micro Motion High-Pressure Coriolis flow meters are specifically designed to meet the challenges of ultra high-pressure environments. The unique meter design provides customers a highly accurate and reliable solution that can withstand the most extreme pressure thresholds in applications where flow measurement is critical.

Here, we present a modular water harvester (MWH) with a serial modular design to promote water productivity. To improve heat management, the commercially available solar vacuum tube used in the device ...

Hydrogen is a clean and efficient secondary energy source and a key component of the global decarbonization strategy. It will play a core role in the continued development and successful completion of the traditional energy transition [1]. Existing commercial hydrogen storage technologies are mainly based on pressure vessels with fast-charging compatibility [2], [3], [4], ...

where dQ is the heat exchange between the gas and cooling water; dm_s and dm_d are the gas mass through the suction valve and exhaust valve, respectively; h_s is through the suction valve into the cylinder gas unit enthalpy; h_d is through the exhaust valve out of the cylinder gas unit enthalpy; $d(m_c u_c)$ is the internal energy increment of the gas in the cylinder; ...

Hence, the economic viability of high-pressure PEM water electrolysis depends on i) the energy cost and ii) the CAPEX of the high-pressure PEMEL system. With a PEMEL system cost of 900 EUR kW⁻¹ and a compressor cost of 3800 EUR kW⁻¹, high-pressure electrolysis at 80, 200, and 350 bar may become economically viable with electricity prices ...

Continuous extraction of ubiquitous atmospheric moisture 6, 7, 8 in arid 9 and semi-arid 10, 11 regions with ample solar energy offers a viable solution for freshwater generation on a kilogram ...

These easy-to-prepare, low-cost, and scalable composites provide a promising solution for achieving ultra-high water uptake ability in a wide range of humidity, thereby offering a closer ...

Technical investigation of the ternary pumped storage hydro units with ultra-high-water head. Li Dongkuo 1, Liu Zishi 2, Min Hongping 3, ... 2 State Key Laboratory of Hydrosience and ...

Shan, H. et al. High-yield solar-driven atmospheric water harvesting with ultra-high salt content composites encapsulated in porous membrane. Cell Rep. Phys. Sci. 2, 100664 (2021). Article CAS ...
