Data shows that the price of power in Europe is typically lowest during the second and third quarters -- the spring and summer months when solar is most productive. Prices are highest during the first and fourth quarters, which coincide with autumn and winter, the least productive periods for solar. 2

Solar water heating. Building a solar water heating system lets you harness sunlight to heat your water. This is critical as water heating typically accounts for more than 30% of most NZ households' power bills. By lowering dependence on conventional energy sources, these systems increase savings while ensuring your water stays warm.
